SUMMARY

Full Stack Developer with 15+ years of experience in IT infrastructure, networking and databases, now applied to software development. Founder of Nowagon Software: I design, build, deploy and operate custom web systems in production for real businesses, including payment integration (Mercado Pago), electronic invoicing (Argentina's ARCA/AFIP tax authority), authentication, security and self-hosted infrastructure with Docker and Linux. I work with JavaScript, TypeScript, Node.js, React, Python and SQL databases, using an AI-assisted workflow (Claude Code) in which I define the architecture and review every change.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, SQL, C#, PHP, HTML5, CSS3

Frontend: React, Next.js, Vite, PWA, responsive design

Backend: Node.js, Express, Fastify, FastAPI, REST APIs, WebSocket, layered architecture

Databases: PostgreSQL, Prisma ORM, SQL Server, SQLite, Oracle PL/SQL, Firebase (Firestore)

DevOps & Infrastructure: Docker, Docker Compose, Linux (Ubuntu Server), Cloudflare Tunnel, PM2, Git, GitHub, Windows Server, Active Directory, VMware, Hyper-V, LAN/WAN networking, VPN, backups

Integrations: Mercado Pago (Checkout Pro, signature-verified webhooks), ARCA/AFIP electronic invoicing (WSAA, WSFEv1), MusicBrainz API

Security: JWT, bcrypt, AES-256-GCM encryption, Helmet, rate limiting, environment-based secrets management

Tools: VS Code, Claude Code (AI-assisted development), Playwright, technical documentation

WORK EXPERIENCE

Founder & Full Stack Developer | Nowagon Software

2025 – Present

Ezeiza, Buenos Aires, Argentina

- Build custom web systems end to end: requirements, architecture, frontend, backend, database, deployment and support.
- Three systems in production for real businesses: automatic electronic invoicing, online photo sales and store-credit management.
- Payment integration with Mercado Pago (signed webhooks, idempotency, reconciliation) and electronic invoice issuing with ARCA (WSFEv1).
- Self-hosted infrastructure: Docker Compose on Ubuntu Server, exposed through Cloudflare Tunnel with no open ports, automated backups and monitoring.

IT Systems Administrator | Aeropuertos Argentina

10/2022 – 10/2025

Ezeiza, Buenos Aires, Argentina

- Administered and supported critical infrastructure for airport operations.
- Incident resolution, technology platform maintenance and vendor coordination.
- Worked with SQL Server in high-availability environments.

Network & Endpoint Administrator | DotCom

08/2019 – 12/2021

Canning, Buenos Aires, Argentina

- Led IT infrastructure migrations and implementations for corporate clients.
- Implemented Active Directory, DNS, DHCP, file servers and networking solutions.
- Configured VPNs, backup systems and IP video surveillance platforms.

IT Specialist | QosIT

04/2019 – 08/2019

Villa La Angostura, Neuquén, Argentina

- Administered wired and wireless networks and supported servers and workstations.

Developer | Indra

03/2014 – 07/2014

Buenos Aires, Argentina

- Developed and optimized Oracle PL/SQL procedures and scripts for Telefónica projects.

IT Specialist | Insystems / All-kom

11/2007 – 12/2012

Buenos Aires, Argentina

- Administered Windows Server, Exchange, DHCP and IIS on IBM and HP platforms.
- Deployed networks, SQL Server and critical infrastructure monitoring.

KEY PROJECTS

Full case studies and live demos at javit1986.github.io

Mercado Pago → ARCA: automatic electronic invoicing | In production

TypeScript, Node.js, Fastify, Next.js, PostgreSQL, Prisma, Docker

- Multi-tenant system that detects every incoming Mercado Pago payment (signed webhooks and asynchronous report polling) and issues the tax invoice with ARCA, including PDF and fiscal QR code.
- PostgreSQL-backed job queue with a single worker to guarantee sequential invoice numbering; idempotent ingestion; per-tenant credentials encrypted with AES-256-GCM.
- Diagnosed and fixed production incidents using read-only audit scripts and dry-run corrections.

Eterno Instante: online photo sales platform | In production

React, Node.js, Express, SQLite, Python (Pillow), Docker

- Platform for beach and event photographers: session search, watermarked gallery, Mercado Pago Checkout Pro payments and downloads through signed, expiring tokens.
- Python worker that matches photos to sessions by EXIF metadata and processes ~1,500 photos per day in parallel; 5 roles with per-route permissions.

Cuaderno Digital: store-credit ledger for small shops | In production

React, Node.js, Express, SQLite, PWA, PM2

- Installable web app (PWA) that replaced a shop's paper ledger: customers, debts, FIFO payment logic and overdue-debt alerts.
- Layered architecture, ~30 REST endpoints, PDF statements shared over WhatsApp, daily backups and hardening for internet exposure.

CD Network Player: local network audio streaming | Working MVP

Python, FastAPI, WebSocket, React, Docker

- Live streaming from a physical CD drive with no audio stored on disk, with player state synced across clients over WebSocket.

Teenage Kicks: online clothing store

React, Node.js, Express, Firebase, Mercado Pago

- E-commerce with authentication (Firebase Auth) and shopping cart; security audit that removed exposed credentials and secured admin routes.

EDUCATION

Web Programming (HTML, CSS & JavaScript) | CodeaRock

2024

Systems Engineering (incomplete, 24 courses passed) | Universidad Abierta Interamericana (UAI)

2008

IT Technician diploma | E.E.S.T. No. 5 John F. Kennedy

2003

LANGUAGES

Spanish: native | English: technical (reading documentation and code)
